

Agile Implementation Methodology

Get Your Money's Worth from Commercial Off-the-Shelf Software

Committed Partner. Creating Results.

Do You Know Where Your ROI is Tonight?

Have you ever purchased expensive applications that promised to provide significant benefits to your company, only to find they did more harm than good? Many companies get mired in the technical details of software implementations, losing sight of the keys to successful deployments—meeting business priorities and user needs.

CC Pace Can Help You Find It.

CC Pace has combined years of system implementation and selection expertise with our proven agile project management and usability techniques to provide a disciplined process that fits solutions to your business. We help you develop a shared vision of what needs to be accomplished, deliver value quickly and manage change through small, incremental releases, while ensuring usability and ROI by keeping users, vendors and stakeholders involved throughout. This collaborative approach tunes expectations and promotes commitment to project success.

Our Agile Implementation Methodology (AIM) allows you to:

- ◆ Manage project risk and change management processes easily with short iterations.
- ◆ React quickly to changing environments and shifting needs with agile, adaptive methods.
- ◆ Involve stakeholders and users throughout the process to avoid unnecessary surprises and ease product adoption.
- ◆ Optimize user productivity, efficiency and satisfaction with rapid collaborative usability reviews.
- ◆ Increase training and support effectiveness while decreasing costs by evolving plans throughout the process.

We keep a sharp focus on your desired business outcomes through frequent stakeholder touch points, allowing you to react rapidly to changing business priorities. Consider the outcomes your company needs, then consider CC Pace. We do the job right—the first time.
