

Application Development & Integration

Do you have Critical Application Objectives?

Committed Partner. Creating Results.

Successful businesses know that quickly developing mission-critical applications can make the difference between competitive advantage and lost revenue.

For more than 29 years, companies including The Carlyle Group, Freddie Mac, and Principal Financial Group have trusted CC Pace to develop their mission-critical systems.

Agile programming methodology

- ◆ Many rapid iterative releases (short release cycles) provide usable, tested code at each stage of development.
- ◆ Project structure encourages user involvement at every step to build an application that meets user requirements.
- ◆ Testing and integrating each release throughout the project (rather than just at the end) reduces risk and improves quality.
- ◆ Giving highest priority to the most important (or riskiest) functions proves feasibility early in the project.

Application architecture that best meets your business needs

- ◆ Technology-neutral architecture that more easily adapts to changing requirements and business objectives.
- ◆ Vendor-neutral approach.
- ◆ Attention to the client's application requirements, from integration and security to scalability and maintenance.

Flexibility for an effective client partnership

- ◆ Significantly improved application quality and shorter development cycles.
- ◆ Customized project planning to ensure client satisfaction and maximum return on investment.

You have a **business to run** and competition to overcome.

We have **talented professionals**

that will put you **ahead of the game.**

Get accountability. Get quality. **Get CC Pace.**
