

Change is unpredictable....

Is your Business Continuity Plan ready?

Committed Partner. Creating Results.

As cumbersome and tedious as updating your plan may be, an outdated plan will cause exponentially difficult challenges when presented with change that hinders the ability to operate your business. CC Pace understands our clients, and the need for a painless solution.

The Business Continuity Planning (BCP) Tool makes updating easy, and allows you to consider threats that exist within your environment and reprioritize as your threat environment and business needs change.

CC Pace designed this tool exclusively for Financial Institutions, employing the same tried and true methodologies and reports that we use for our clients. While outsourcing the creation of a BCP is preferable to most, CC Pace recognizes that it is not feasible for all, and provides this do-it-yourself tool for a fraction of the cost of a traditional consulting engagement.

CC Pace's BCP Tool is installed on your internet (or intranet) and is customized to each user based upon their login type.

The BCP manager can monitor the progress of all parties involved in the planning process through easy to read status reports that roll up to the Business Unit level and then to the Corporate level. Instead of one individual or group determining priority levels, the BCP Manager parses out duties to those who have the answers.

Sounds easy? It finally is.

The BCP Tool is provided for a one time fee of \$3,500, or alternatively, CC Pace offers the tool with consulting packages, if you prefer to be either guided through the process, or have your plan created for you. For additional information, please contact us at (703) 631-6600.
