

CC Pace's Seamless System-to-System Solution Gets Your Company Connected

You shouldn't have to use a horde of software products to originate and deliver loans profitably. But when your systems don't talk to each other — or to other third party systems — where do you turn?

CC Pace specializes in making technology work for you by reducing cycle time, eliminating rework, and driving down error rates through seamless integration. We develop custom solutions for your specific needs and also provide industry solutions for common connectivity problems.

- ✓ **Automated Underwriting System Connector:** Our solution to AUS connectivity offers connections to Freddie Mac's LoanProspector.com and Fannie Mae's XIS. CC Pace customizes the software to connect seamlessly to your LOS.
- ✓ **Loan Guaranty Express:** Lenders needed a way to connect to the VA's electronic guaranty (EDI) system. CC Pace developed a web-based ASP that enables lenders to easily connect to the VA. We can also provide B2B functionality to allow seamless integration with the lender's LOS.
- ✓ **RTRS Web Integration:** Our Web interface to the MSRB's Real-Time Transaction Reporting System offers a Graphical User Interface (GUI) into an interactive messaging system that provides surveillance and transparency reporting on municipal bond trades. Our Web interface bridges the GUI world and the interactive messaging world, opening up the system to smaller traders who might not be able to afford a complete interactive messaging Interface.

CC Pace's proven solutions will
lead the way to seamless connectivity.
Don't just meet your competition, let us help you
beat your competition.
